Predikcija rizika od kardiobaskularnih bolesti

Nemanja Kostić 1753

Projekat iz predmeta "Veštačka inteligenicja u medicini"

Dataset: https://www.kaggle.com/datasets/bertnardomariouskono/cardiovascular-disease-risk-prediction-dataset

Uvod

Nad pomenutim datasetom iskorišćene su tehnike *ML*-a u cilju detektovanja i određivanje verovatnoće rizika oboljenja od kardiovaskularnih bolsti. Kardiovaskularne bolesti su oboljenja koja zahvataju srce i krvne sudove (arterije i vene). To su najčešći uzrok smrti u svetu, ali se mnoge mogu sprečiti zdravim načinom života i redovnim kontrolama. Konkretna tehnika koja je korišćena je binarna klasifikacija. U projektu je obrađeno više algoritama binarne klasifikacije koji će biti upoređeni. Rad se sastoji od preprocesiranja dataseta, primena algoritama i vizualizacija rezultata uz pomoć nekih validacionih metoda. Na kraju, rezultati će biti upoređeni sa *finetune*-ovanim algoritmima koji su se najbolje pokazali.

Dataset

- Patient_ID - Id pacijenta. Polje će biti ignorisano
- Age - Godina starosti
- Gender - Pol
- Height_cm - Visina
- Weight_kg - Težina
- BMI
- Systolic_BP
- Diastolic_BP
- Cholesterol_Total
- Cholesterol_LDL
- Cholesterol_HDL
- Fasting_Blood_Sugar
- Smoking_Status
- Alcohol_Consumption
- Physical_Activity_Level
- Family_History
- Stress_Level
- Sleep_Hours
- Heart_Disease_Risk
